

MIJ Putz Cardboard Car Pattern

Notes :

This is a pattern I made from looking at an original car on a MIJ putz house. I haven't tested this pattern yet, but it should be close, you may have to do a little trimming here or there. I traced the pieces from the one I eyeballed and scanned it in and cleaned up the lines a bit.

The wheels I wanted to be perfectly round, so I actually used a three hole punch and used the pop outs.

To achieve the curve in the back of the car and the hood, I cut out the piece and then pressed around the edge of the handles on my scissors to mold it to shape.

I don't know if the original had a bottom but I left it open so I could slide up some clear acetate to make windows, as I read on PAPA Teds site that the original had windows.

Good Luck and Happy Putzing!

-Brian
